### MOTOR TORQUE (Nm)

In order to determine the motor torque, consider the maximum accidental pressure. The design must include a safety coefficient.

RKE damper

Ex :

$\Delta P = 1000\text{Pa}$

Damper :

L 1000 x H=1000

=>  $C_m = 12,5\text{ Nm}$

## PRESSURE LOSS

Pressure loss (Pa) according to air velocity (m/s) and blades' opening angle (°). Damper ducted upstream and downstream. 0° = damper fully open
